

Flamingo Crop Milk

DESCRIPTION

This product is formulated for hand-rearing flamingos during the first days of life. It is a highly concentrated and digestible formula rich in Canthaxanthin and Beta-carotene. It is formulated to constitute 100 % of the chick's diet during that period.

FEEDING RECOMMENDATIONS

On day one, the concentration should be increased from approximately 1 % in the first feeding bout to 20 % in the last one.

From day 3, use a concentration of 25 % (25 % powder formula + 75 % water).

Confirm that the crop is empty in the morning.

Leftover formula must be discarded after each feeding bout.

After opening, store in an air-tight container in a cool, dry place.

While refrigeration is not advised, freezing is possible if it is kept hermetically sealed

PREPARATION

Prepare with lukewarm (37-39 °C) water at a concentration of 25 %. The final texture should be similar to a shaken yogurt.

DAILY INTAKE

Feed between 7 to 10 ml of reconstituted formula per 100 g of body weight and feeding bout. The number of feeding bouts per day will depend on the age of the chick and the crop emptying rate.
