

General Recovery

DESCRIPTION

General Recovery is formulated to be used as a support food for sick and injured birds in recovery process. It is a complete food designed to be a source of easily assimilated nutrients.

Due to its high content of sugars, it should not be used for birds with crop candidiasis.

FEEDING RECOMMENDATIONS

Administer directly into the crop by a soft feeding tube or a stainless steel feeding needle.

The formula must be freshly prepared for each feeding session and any leftover formula should be discarded.

PREPARATION

To prepare the formula, pour it into warm water and mix it using a stainless steel whisk. Concentration of solids should be approximately 25 %. Water should have a temperature close to 39 °C.

Avoid using a microwave oven.
