

Micro

DESCRIPTION

This product is intended for small parrot species (genera *Melopsittacus*, *Neophema*, *Nymphicus*...) which consume mainly grass seeds in the wild.

It is a maintenance diet formulated to feed pet birds and breeding pairs during non-reproductive periods. Its composition meets the nutritional requirements of birds during this time.

FEEDING RECOMMENDATIONS

Micro is designed to constitute 100 % of the parrot's diet in non-reproductive periods. However, if fresh fruit and vegetables are provided daily to give variety to the diet, Psittacus Micro should constitute no less than 70-80 % of the overall diet by weight.

During the breeding season, birds should always have access to **Psittacus Eggfood**, **Wet&Dry Microspheres 20/10** and **Calcium Grit Fine**.

It is recommended that **Silex Grit** is available in order to cover the mechanical needs of the digestive tract.

No vitamin or mineral supplements should be given to parrots whose staple food is **Psittacus Micro**.

Renew feeder with fresh food and water daily.

Once the package is opened, store in an air-tight container in a cool, dry place.

DAILY INTAKE

Daily intake ranges from 10 to 18 % of the bird's body weight. For instance, budgerigars consume between 3 and 8 g/d.

Ambient temperature influences intake significantly.
