PSITTACUS

FORMULA

Minor

Minor - Minor

DESCRIPTION

This product is intended for small-sized parrots (genera *Agapornis*, *Cyanoramphus*, *Pyrrhura*, *Forpus*...) which in the wild consume a great diversity of foods: seeds, fruit, berries, leaves, buds and even some invertebrates.

It is a maintenance diet formulated to feed pet birds and breeding pairs during non-reproductive periods. Its composition meets the nutritional requirements of birds during this time.

FEEDING RECOMMENDATIONS

Minor is designed to constitute 100 % of the parrot's diet in non-reproductive periods. However, if fresh fruit and vegetables are provided daily to give variety to the diet, Psittacus Minor should constitute no less than 70-80 % of the overall diet by weight.

During the breeding season, birds should always have access to **Psittacus Eggfood**, **Microspheres 20/10** and **Psittacus Calcium Grit Fine** as a source of calcium. Ensure birds have **Psittacus Silex Grit** available to cover the mechanical needs of the digestive tract.

No vitamin or mineral supplements should be given to parrots whose staple food is **Psittacus Minor**.

Renew feeder with fresh food and water daily.

Once the package is opened, store in an air-tight container in a cool, dry place.

DAILY INTAKE

Daily intake ranges from 10 to 18 % of the bird's body weight. For instance, lovebirds will consume between 4 and 10 g/d.

Ambient temperature influences intake significantly.
