

Soluble Calcium Supplement

DESCRIPTION

It is a complementary food for birds. This water-soluble source of calcium is an extremely available calcium source. It can be administered preventively or as a treatment in situations of calcium deficiency.

FEEDING RECOMMENDATIONS

It can be administered diluted in drinking water or sprinkled on the food. It should be noted that this administering method does not allow birds to regulate their calcium intake as they do when they have a solid calcium source available (calcium grit).

If birds are consuming a complete food correctly balanced in calcium and have also permanent voluntary access to calcium grit, this supplement is not recommended except under special circumstances or veterinary prescription. It is important not to exceed the recommended dose below indicated so as not to depress the bird's ability to mobilize bone calcium.

DOSAGE

Dilute from 11 to 23 g of powder Soluble Calcium per liter of drinking water between 3 and 5 days per week. Use the maximum dosage only at times of highest calcium requirements (egg laying and growth).

NUTRITIONAL INFORMATION

COMPOSITION:

Minerals: Calcium lactate, Calcium gluconate, maltodextrin, sodium chloride.

Additives: Flavourings: Blend of flavourings.

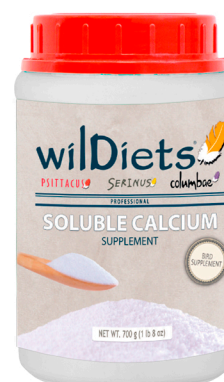

ANALYTICAL COMPONENTS: Moisture 3.0 %, Calcium 10.0 %, Sodium 3.9 %, Phosphorus 0.0 %.

PACKAGE

Botes de 100 g y 700 g.
