

SERINUS

Serinus Wet & Dry Microspheres 25/18

Use

This product is intended for all kind of small granivorous passerine birds. Micro extruded MICROSPHERES are the maximum expression of versatility added to a nutritional excellence. Thanks to the little size of the microspheres, birds are able to ingest them completely, whether we choose to supply them dry or we supply them hydrated. As wet food, mixed with other food or as a unique diet, they are excellent to stimulate the feeding of pigeons.

Daily intake

Birds consume about 3-4 g per day. Intake varies according to the ambient temperature (the lower temperature is, the more food they need). Intake will also vary according to the number of chicks reared by the parent birds and their stage of development. This product should be provided *ad libitum*, both wet and dry.

Directions for use

It is a complete food: birds get all the nutrients they need to enjoy great health, excellent vigour and optimal plumage.

It is designed as an exclusive diet, but may also be used as a complement to improve the diets based in seed mixtures. In addition, leafy greens could be supplied regularly in order to vary the diet.

Females temporarily increases their calcium requirements for the eggshell formation which must be readdressed with our *Calcium Grit* product.

We advise that birds should always have access to our *Silex Grit*, provided in a different feeder, in order to ensure the correct running of the gizzard.

Once opened, store in a cool, dry place.

Composition

Cereal grains, products and by-products of seeds and oleaginous fruits, vegetable oils, legume seeds, products and by-products of cereal grains, dried whole egg, dried brewer's yeast, products and by-products of tubers and roots, minerals, inulin (0,05%)
